## INTRODUCTION TO GENERAL REPORT.

VOLUME FOURTH.

The contents of this Report are divided into two parts.

The first part consists of a series of tables, giving the summaries or totals of the various tables of the 1st, 2nd and 3rd volumes, with the proportionate ratios to population and territory.

The second part is a continuation of Table III of the fifth volume of the Census of 1871, being a statement of the movement of the Catholic population of the Province of Quebec, or in other words, the register of the marriages, births and deaths of that population, from its very early settlement down to the year 1883.

It would be the most arrant presumption, and would truly be claiming to be more than human, to say that these three volumes of 1,400 pages of solid figures were absolutely perfect in every detail.

An omission of enumeration was made in Queen's, Prince Edward Island. It was of a pottery, the value of products being about $5,000.

There exists a discrepancy, or want of proportionate agreement, in relation to the totals of New Brunswick and Nova Scotia, with the industries as respectively reported last Census, and would appear to indicate that the latter had been somewhat exaggerated, while in St. John, N.B., they had, in a like manner, been underrated, and this has led to an investigation being had, with the following result:—

The underrating in the value of the industries alluded to took place in St. John, N.B., and is estimated, in the aggregate, at $300,000, including a match factory, which had been enumerated as in Restigouche County, on account of the proprietor happening to be there at the time, where he owned a mill.

# RECENSEMENT DU CANADA, 1881.

## INTRODUCTION AU RAPPORT GÉNÉRAL.

QUATRIÈME VOLUME.

Les matières de ce rapport sont divisées en deux parties.

La 1ère partie comprend une série de tableaux, donnant les sommaires ou totaux des différents tableaux des 1er, 2me et 3me volumes, avec l'état proportionnel à la population et au territoire.

La 2me partie est une continuation du tableau III, du 5me volume du recensement de 1871, et un état du mouvement de la population catholique de la Province de Québec, ou en d'autres termes la compilation des registres des mariages, naissances et décès de cette population, depuis les premières années de son établissement jusqu'à l'année 1883.

Ce serait la plus insigne présomption et vraiment prétendre l'impossible que de dire que ces 3 volumes de 1,400 pages de chiffres fussent parfaits dans tous leurs détails.

Une omission dans l'énumération a été faite dans le comté de Queens, Ile du Prince-Edouard ; c'était à propos d'une poterie dont la valeur des produits s'élevait à $5,000 environ.

Il existe une différence ou un manque de proportions dans le rapport des totaux du Nouveau-Brunswick et de la Nouvelle-Ecosse, d'avec les industries mentionnées dans le dernier recensement qui semblerait indiquer que ce dernier a été quelque peu exagéré ; tandis qu'à St.-Jean, Nouveau-Brunswick, les rapports des industries ont été estimés au-dessous de leur valeur. Ce qui a occasionné une enquête donnant les résultats suivants :—

La diminution dans la valeur des industries qu'on a dit avoir eu lieu à St.-Jean, Nouveau-Brunswick et a été évaluée au montant de $300,000, comprenant une manufacture d'allumettes ajoutée au rapport du comté de Restigouche, parce que le propriétaire, qui y a un moulin, s'y trouvait dans le temps.

The following are the industries, portions of which were omitted: Carving and guilding, cooperage, dressmaking and millinery, engraving and lithographing, gold and silver smithing, musical instrument making, patent medicine manufacturing, saddle and harness making, saw and file cutting, ship material making, tin and sheet-iron working and wood-turning, to the aggregate amount of $300,000, above mentioned.

Actual errors in the Census are few as compared to the real errors made by the critics of the Census.

A few instances will show: Watchmaking and jewellery-making are industries said by the critics to have been, to a large extent, overlooked.

Our watchmakers and jewellers, as a rule are merchants, and cannot be said to convert anything of importance, but when they do so they come under the more appropriate class of "gold and silversmiths."

In the same way photographic galleries cannot be called manufactories, because the proprietors of these galleries do not make the materials used by photographers.

The same may be said of dentistry. What raw materials are converted by the dentist? The manufacture of dental material is another thing.

One of the critics gives an instance of gross blundering, but he should rather have given it as an instance of his own misquoting.

The instances referred to are "book binding and edge-tool making." For bookbinding the figures appertaining to boot and shoe making are quoted. In edge-tool making, at page 445, third line from the bottom, the totals for New Brunswick, $48,460 are given as the value of products, while it is said that in the summary tables they are omitted, but nevertheless they are there in their proper place. See page 509, eighth line from the bottom.

It appears to be scarcely necessary to take up time and space in the report with notice of the remarks made on the shipping, because the objections were all answered when the criticism appeared, but there is one thing that must be alluded to, "the withholding of another volume which is confessedly inaccurate." If such a volume were ever withheld it was prepared without the knowledge of any one connected with the Census room, which, need scarcely be said, was impossible. The fact is that no such volume was ever made or contemplated, that nothing is withheld, and that no compilation of any kind has ever been or is withdrawn from the public eye, and no manipulation of figures has been resorted to or allowed.

Many of these errors of the critics have their source in the fact that several known industries are mixed in various establishments which must be recorded under one title, because it is positively impossible to discriminate between them and make up accounts for each separate element of the joint industries.

Ci suit est la liste des industries omises: sculpture et dorure, tonnellerie, couture et confection d'habits, gravure, lithographie, placage en or et en argent, manufacture d'instruments de musique, manufacture de remèdes patentés, sellerie, scierie, matériaux pour la construction des bâtiments, ferblanterie et tôleries et tours à bois, au montant de $300,000 ci-dessus mentionné.

Les erreurs actuelles dans le recensement sont peu nombreuses en comparaison des erreurs réelles faites par les critiques du recensement.

Quelques exemples vont le montrer: L'horlogerie et la joaillerie sont des industries, est-il dit par les critiques, qui ont été considérablement négligées. On ne peut pas dire que les horlogers et joailliers, qui sont des marchands, exercent une industrie ayant pour but de transformer les matières premières; mais quand ils le font, ils sont plus convenablement entrés dans la classe des orfèvres.

De même les galeries photographiques ne peuvent être appelées "manufactures" parce que les propriétaires de ces galeries ne fabriquent pas les matériaux employés par les photographes.

La même chose peut être dite de l'art dentaire. Quelles matières premières sont travaillées par le dentiste? La manufacture de matériaux dentaires est autre chose.

Les critiques ont commis des erreurs positivement impardonnables: C'est ainsi qu'ils ont cité pour la reliure les chiffres appartenant à la cordonnerie et que, relativement à la manufacture d'instruments tranchants à la page 445, 3me ligne du bas, les totaux pour le Nouveau-Brunswick, $48,460, sont donnés comme la valeur des produits, tandis qu'il est dit que dans le sommaire ils sont omis; néanmoins ils y sont à leur place. Voir page 509, 8me ligne du bas.

Il ne semble presque pas nécessaire de prendre le temps et l'espace dans ce rapport de s'occuper des remarques faites sur la marine, parce que les objections ont été réfutées quand la critique a paru. Mais il y a une autre chose à laquelle il faut faire allusion: "La soustraction à la vue du public d'un autre volume qui a été reconnu inexact." Si un tel volume a été soustrait, il a été préparé sans la connaissance des employés du recensement; ce qui, inutile de le dire, était impossible. Le fait est qu'aucun volume de ce genre n'a été fait ni projeté, que rien n'est caché et qu'aucune compilation d'aucune sorte n'a été et n'est soustraite à l'œil du public, et qu'aucune manipulation de chiffres n'a été employée ou permise.

Beaucoup de ces erreurs des critiques ont leur source dans le fait que plusieurs industries connues sont mêlées, dans différents établissements qui ont dû être enregistrés sous un seul titre, parce qu'il est positivement impossible de les distinguer séparément, et de faire le montant pour chaque élément séparé des industries réunies.

For a more ample answer to the critics, the memorandum on the subject published by Mr. Taché, is here reproduced.

---

THE THIRD VOLUME OF THE CENSUS OF 1881 AND ITS CRITICS.

The third volume of the Census of 1881, which contains the result of the laborious and intricate inquest on the material conditions of Canada, is the subject of attacks from some newspapers. I have thought it my duty, both in the public interest and in justice to the officers connected with the work, especially the Chief Compiler, Mr. Layton, who have to my knowledge, honestly, diligently and intelligently accomplished their arduous task, to show the fallacies and the unfairness of these attacks.

It should not be necessary, but it seems, nevertheless, opportune to remark that absolute accuracy is never to be expected from such a labor as a Census, no matter when, no matter where, and no matter by whom it is executed. It is a false notion to compare the operation of such inquiries to the work of book-keeping and of balancing commercial or financial accounts. To impugn the result of a Census and question its immense usefullness, because errors of details are detected in it, is just as absurd and mischievous as would be an assault on the whole machinery of postal or Customs service, because a certain number of letters got astray and certain inaccuracies are found in reports. Nothing human is unfailing, and errors will occur, do what you may to guard against them: the more or less perfection is the more or less avoidance of such occurrences.

Men at all acquainted with the subject will not take notice of such errors, apparent or real, unless they materially affect the general results of the investigation; they know that when the returns give 32,350,269 bushels of wheat, it means about 32,000,000, and that such errors or inaccuracies of details, whether they are of enumeration, of compilation, of posting or printing, some being of overrating and others of underrating, generally balance each other: the only question is to see if they are not such as to notably influence the grand result and its proportionate deductions.

With these few preliminary remarks, I shall at once take up the points which have been made the subject of the attacks I propose examining.

*The Relation between Numbers of Dwellings and Houses owned.*

In table I of the first volume is given the number of separate *dwellings* subdivided into five categories, namely: vessels, shanties, inhabited houses, uninhabited houses, and houses in construction, situated in each district; in table XXI of the third volume are given the number of houses owned by the inhabitants of each district. The critics assume that the results of these two separate and quite distinct informations should exactly correspond, and on such extraordinary assumption attack the accuracy of the Census, because in the Census returns the figures representing these two results do not correspond.

The fact of the matter is that if these figures were in precise correspondence it would be a proof that they had been "cooked" and made, by a dishonest process, false and erroneous, for otherwise they cannot agree, being of different nature and purpose.

First, it is self-evident that vessels afloat, shanties, tents and wigwams of nomads are not houses owned, although they are dwellings; second, that houses owned by non-resident persons or companies are not to be included in the number of houses owned in Canada, although they are Canadian dwellings: this at once makes the number of houses owned smaller than the number of dwellings, by many thousands. The error of the critics, in this instance, is such that they have dwelt on the fact that in the Territories there are only 1,242 houses owned by Canadians for 11,652 occupied; when the Census shows that 9,357 of these dwellings are not houses, but the lodges of nomadic populations.

Pour plus ample réponse aux critiques, le mémoire sur le sujet, publié, dans e temps, par M. Taché, est ici reproduit. (*Traduit de l'anglais.*)

LE TROISIÈME VOLUME DU RECENSEMENT DE 1881 ET SES CRITIQUES.

Le troisième volume du Recensement de 1881, qui contient le résultat de recherches laborieuses et difficiles sur les conditions matérielles du Canada, est en ce moment l'objet des critiques de quelques journaux. Je crois devoir, dans l'intérêt public et en justice pour les fonctionnaires qui ont fait le travail du recensement,—en justice surtout pour le chef des compilateurs, M. Layton, qui, je le sais, a accompli cette tâche ardue en toute conscience, avec diligence et d'une manière intelligente,—je crois devoir, dis-je, démontrer l'injustice de ces attaques et relever les erreurs sur lesquelles elles s'appuient.

Il ne devrait pas être nécessaire, mais il me semble opportun de faire observer ici qu'on ne doit jamais compter sur une exactitude absolue dans un travail de recensement,—peu importe quand, où et par qui il a été fait. On se tromperait étrangement en comparant ce travail à celui de la tenue des livres et de la comptabilité. Contester les résultats d'un recensement et son immense utilité parce qu'on y découvre quelques erreurs de détail, c'est aussi absurde et malicieux que d'aller s'attaquer, par exemple, à tout le rouage du service des postes et des douanes parce que quelques lettres se sont égarées et que les rapports du fisc contiennent quelques inexactitudes. Les œuvres humaines ne sont pas, ne peuvent pas être infaillibles : quoi qu'on fasse, il s'y glisse toujours des erreurs. Leur plus ou moins grand degré de perfection, c'est de faire en sorte que ces erreurs se produisent le moins souvent possible.

Ceux qui sont bien au fait de la question ne tiendront pas compte de ces erreurs, apparentes ou réelles, si elles ne changent rien au résultat général du travail. Ils savent que quand les relevés accusent 32,350,269 boisseaux de blé, cela signifie environ 32,000,000, et que de telles erreurs ou inexactitudes de détail,—qu'elles se produisent dans l'énumération, la compilation ou l'impression,—s'équilibrent généralement, car elles consistent, les unes dans une évaluation trop élevée, les autres dans une évaluation trop basse. L'important est de veiller à ce qu'elles ne soient pas de nature à influencer le grand résultat et les déductions qui en découlent.

Avec ces quelques observations préliminaires, je vais maintenant passer en revue les différents points qui ont été attaqués par la presse.

*Relation entre le nombre des demeures et des maisons possédées.*

Le tableau I du premier volume donne le nombre des *demeures* séparées, subdivisées en cinq catégories : navires, chantiers, maisons habitées, maisons inoccupées et maisons en construction dans chaque district ; le tableau XXI du troisième volume donne le nombre de maisons possédées par les habitants de chaque district. Les critiques prétendent que les résultats de ces deux renseignements, séparés et tout à fait distincts, devraient correspondre exactement, et, se fondant sur une prétention aussi extraordinaire, ils attaquent l'exactitude du Recensement, parce que dans la statistique les chiffres représentant ces deux résultats ne correspondent pas ensemble.

Le fait est que si ces chiffres étaient exactement les mêmes, ce serait la preuve qu'ils auraient été, par un procédé déshonnête, " préparés " et falsifiés, car autrement, étant d'une nature différente et couvrant des choses différentes, ils ne sauraient concorder.

D'abord, il va de soi que les navires, les chantiers, les tentes et les loges des tribus nomades ne sont pas des maisons possédées, bien qu'ils constituent des demeures ; il est également évident que les maisons appartenant à des propriétaires non-résidents ou à des compagnies étrangères ne doivent pas être comprises dans le nombre des maisons possédées au Canada, bien qu'elles soient des demeures canadiennes : de suite, cette différence fait que le nombre des maisons possédées est de plusieurs milliers plus petit que celui des demeures. Ici, l'erreur des critiques est

But there is another reason which influences the difference in a much greater ratio, coming from the fact that many, a great many, houses built and owned as one immovable property form two or more separate dwellings or abodes. By instruction, the enumerators were thus ordered in regard to dwellings to be entered in table I: "A separate house is to be counted wherever the entrance from the outside is separate." No such thing in relation to table XXI, where are entered as one property, one house owned, any such real estate which is by the proprietor thereof considered one building of human abode, no matter that it does oftentimes comprise two separate dwellings or inhabited houses with separate entrance under the same roof.

Hence, when the Census gives (1881) 753,017 occupied dwellings it includes 116 vessels, and 14,692 shanties, tents or wigwams: when it gives 738,209 houses as dwellings occupied, and only 712,440 owned, it is not only *primâ facie* correct, but it also conveys the information, worth having, that there were in 1881 about 25,000 houses with double separate dwellings.

There is, on this point, no apparent error, and none to be suspected. Therefore, when the critic, on the face of these figures, exclaims: "It is one of those " things, we fancy, that no fellah can understand," it only shows that he, the critic, has failed to understand a very simple thing.

---

*The amount of tonnage owned by Canadians in the Census does not agree with the tonnage registered in accordance with the " Merchant Shipping Act."*

It would be a matter for more than ordinary astonishment if they did, for the two things are of different nature, and form no possible criterion of separate or comparative accuracy.

One might just as well make the addition of all the births registered in a country for the last thirty years, and say :—that is the present population of that country.

It is with shipping as it is with other kinds of property : the total of acres on the maps, of houses on the valuation lists, of tons of shipping on the register books, are no correct indication of the number of acres, of houses and of tonnage *owned* by the inhabitants of Canada, to the exclusion of non-residents at any given moment.

In regard to shipping, the mere transfer of registration from a Canadian port to another British port, outside of Canada, and the keeping, on the registers, of hundreds of vessels which have ceased to exist, but the disappearance of which has not been reported, alters the totals of tonnage to a comparatively very large ratio, at the same time that the first may not alter a unit in the tonnage owned in Canada and that the second diminishes it to the extent of its disappearance. Extensive sales to non-Canadians also necessarily alter the figure of *tonnage owned* in Canada, but not necessarily the *tonnage registered.*

A broad fact is that the amount of tonnage owned by inhabitants of Canada is, *every year*, increased by many thousands of tons, and the Census shows an increase of 253,588 tons during the decenniad comprised between the years 1871 and 1881, in the four older Provinces. There is no such rule applicable to the register books, on account of transfers of registration and the erasing on the ascertaining of disappearance. It is in this way that between the years 1878 and 1880, when the *Canadian ownership* was experiencing a large increase, the *registration* shows a considerable decrease in tonnage : the registered figures are, 1,333,015 for the year 1878, 1,332,094 for the year 1879, and 1,311,218 for the year 1880.

But whether or not the registration contains the records of those facts and those fluctuations to which ships are submitted as regards ownership, and in particular *Canadian ownership*, such portion of the registers which concerns them is not compiled and is not tabulated in the Reports of the Department of Marine and Fisheries, which purely and simply gives the addition of tonnage registered in Canada, no matter if they are in a greater or lesser proportion owned by inhabitants of Canada.

telle qu'ils ont insisté sur le fait que dans les Territoires il y a seulement 1,242 maisons possédées par des Canadiens et 11,652 inoccupées, lorsque le Recensement fait voir que 9,357 de ces demeures ne sont pas des maisons, mais des cabanes de populations nomades.

Mais il y a une autre cause qui justifie davantage la différence: c'est le fait qu'un grand nombre, un très grand nombre de maisons construites et possédées comme ne faisant partie que d'un immeuble constituent deux demeures ou habitations séparées, et quelquefois plus. Voici les instructions que les énumérateurs ont reçues pour les demeures qui devaient figurer au tableau I: "Vous devrez inscrire comme demeures séparées toutes celles dont l'entrée extérieure est séparée." Il n'en a pas été de même pour le tableau XXI dans lequel est inscrite comme maison possédée toute propriété de ce genre donnée par son propriétaire comme d'un seul tenant, bien que cette maison puisse constituer deux demeures séparées, avec entrées séparées sous le même toit.

Ainsi, lorsque le Recensement (1881) accuse 753,017 demeures occupées, ce chiffre comprend 116 navires et 14,692 chantiers, tentes ou loges; lorsqu'il accuse 738,209 maisons comme demeures occupées et seulement 712,440 maisons possédées, il n'est pas seulement *primâ facie* correct, mais il donne aussi un renseignement qui n'est pas à dédaigner: c'est qu'il y avait, en 1881, environ 25,000 maisons à double logement.

Sur ce point il n'y a pas d'erreur apparente, et on ne saurait en soupçonner. Par conséquent, lorsque le critique, en présence de ces chiffres, s'écrie: "C'est, croyons-nous, une de ces choses que personne ne peut comprendre," il fait voir seulement qu'il n'a pu comprendre une chose très simple.

---

*Le tonnage représenté dans le Recensement comme appartenant à des Canadiens ne s'accorde pas avec celui qui est enregistré conformément aux Actes de la marine marchande.*

Il y aurait certainement lieu de s'étonner si ces deux choses s'accordaient, car elles sont d'une nature différente et ne forment aucun criterium possible d'une exactitude séparée ou comparative.

Vaudrait tout autant faire l'addition de toutes les naissances enregistrées dans un pays depuis trente ans, et dire:—Voilà la population actuelle de ce pays.

Il en est de la propriété maritime comme des autres propriétés: le total d'acres inscrits sur les cartes, de maisons sur les rôles d'évaluation, de tonneaux de jaugeage sur les registres, n'indique pas exactement le nombre d'acres, de maisons ou de navires possédés par les habitants du Canada, à l'exclusion des non-résidents à un moment donné.

En ce qui regarde les navires, le simple transfert d'enregistrement d'un port canadien à un autre port britannique en dehors du Canada, et le maintien sur les registres de centaines de navires qui ont cessé d'exister, mais dont la disparition n'a pas été signalée, modifient les totaux dans une proportion comparativement très considérable, pendant que le premier peut ne pas changer une unité dans le tonnage possédé au Canada et que le second le diminue dans la proportion des navires disparus. ¿Des ventes importantes faites à des non-Canadiens changent aussi, naturellement, le chiffre du *tonnage possédé* au Canada, mais pas nécessairement le *tonnage enregistré.*

Un fait certain, c'est que la quantité de tonnage possédé par des habitants du Canada est, *tous les ans,* augmentée de plusieurs miliers de tonneaux, et le Recensement accuse une augmentation de 253,588 tonneaux, pendant la période décennale comprise entre les années 1871 et 1881, dans les quatre premières provinces. Il n'existe pas de règle semblable qui puisse s'appliquer aux registres, à cause des transferts d'enregistrement, et de l'effacement des navires quand leur disparition est constatée. C'est ainsi que, entre les années 1878 et 1880, alors que la *propriété canadienne* recevait une forte augmentation, l'enregistrement accuse une diminution considérable dans le tonnage: les chiffres enregistrés sont, 1,333,015 pour l'année 1878, 1,332,094 pour l'année 1879, et 1,311,218 pour l'année 1880.

All this looks so plain, that the wonder to me is that it could escape the understanding of any one. The Marine returns convey one sort of information, and the Census returns another sort of information; they cannot take the place of each other, cannot be tested one by the other, and they cannot agree, unless it be a mere and not to be expected coincidence. The only relation they bear, one towards the other, is that they belong to cognate subjects.

---

*The changes which have taken place between the Two Censuses in the Ownership of Lands in Districts.*

Of course, changes in the acreage of lands owned by the inhabitants of each district are continual; if such were not constantly taking place it would show a total stagnation in land transactions, in a country where several millions of acres of wild lands are owned by individuals, and where millions over millions of Crown lands are for sale; and when the two Censuses show that, the private ownership of lands in Canada has actually undergone, between the years 1871 and 1881, an increase of several millions of acres.

What astonishes these critics especially is, that in several districts the acreage owned is less in 1881 than in 1871, and very considerably so for few districts. But the figures of the Census are simply the expression of facts, of which reasoning alone demonstrates the necessary existence. It is precisely in such districts where the largest ownership of wild lands was formerly existing that immense reduction of acreage owned must take place. Why? Simply from changes in residence of owners or of limits of districts, and because these lands were to be sold, and were actually, to a large amount, sold to inhabitants of other districts. The City of Quebec had 2,632,874 acres of lands owned in 1871, and only 588,117 in 1881; but the County of Quebec, which encircles the city, had only 363,727 acres owned in 1871, and as much as 1,078,005 in 1881. A simple change of residence of large owners from the limits of the city to the surrounding district explains the vastness of the change, so far as the figures go, and when by inquiry you learn that hundreds of thousands of acres of wild lands, owned by Quebec inhabitants, have been sold to inhabitants of other districts, such as vast tracts situated in Anticosti, in the Eastern Townships, in the seigniories of Beaupré, Fossambault, and in many other places, the wonder vanishes away.

There are other changes which are due to another cause, in addition to those mentioned, from the fact that the readjustment of electoral districts, following the Census of 1871, has made many census districts materially different in 1881 from what they were in 1871, in extent of territory, population, and in every other respect.

Therefore, again, it is not the Census which on this point is caught in "extravagances of falsehood, &c., &c.," but the critics.

The same remarks apply to village lots, houses, warehouses, shops and vessels; this is so self-evident that it would be almost an insult to the intelligence of the reader to insist on it, and follow that manner of criticising through its vagaries.

---

*The Excess of Acres of Land Occupied Over the Area in Few Districts.*

The reason and meaning of that is explained in the introduction to the third volume, where it is said: "The exceptions are, when residents of cities and towns "occupy and work lands situated outside the limits thereof, and upon which no "person resides. It occasionally happens in villages and old settled townships "that a part of the holding extends beyond the limits of the village or of the town-"ship." It is very simple; the acres occupied are made to follow the person of

Mais, que l'enregistrement consigne ou non ces faits et les fluctuations auxquelles les navires sont soumis quant à la propriété, et spécialement la *propriété canadienne*, la partie des registres qui la concerne n'est pas compilée et elle n'est pas mise en tableau dans les rapports du ministère de la marine et des pêcheries, lesquels donnent purement et simplement l'addition du tonnage enregistré au Canada,—que les navires appartiennent dans une proportion plus ou moins grande à des habitants du Canada ou à des étrangers au Canada.

Tout ceci est si clair, que je m'étonne qu'il puisse échapper à l'intelligence la plus ordinaire. Les relevés de la marine contiennent une classe de renseignements, et ceux du recensement une autre classe ; ils ne peuvent ni se remplacer ni se contrôler, et ils ne sauraient s'accorder, à moins que ce ne soit par une coïncidence toute fortuite et inattendue. La seule relation qu'ils aient entre eux, c'est qu'ils se rattachent à des sujets analogues.

---

*Les changements qui ont eu lieu, entre les deux Recensements, dans la propriété des terres dans les districts.*

Naturellement, les changements qui se produisent dans l'étendue des terres possédées par les habitants de chaque district sont constants ; s'il n'en était pas ainsi, ce serait un signe de stagnation complète dans les transactions s'exerçant sur la propriété foncière, dans un pays où plusieurs millions d'acres de terre à l'état primitif appartiennent à des particuliers, où des millions et des millions de terres de la couronne sont à vendre, et quand les deux recensements établissent que la propriété privée de terres, au Canada, a véritablement subi, entre les années 1871 et 1881, une augmentation de plusieurs millions d'acres.

Ce qui étonne surtout les critiques, c'est que dans plusieurs districts l'étendue de terres possédées est moindre en 1881 qu'elle n'était en 1871, et énormément plus faible dans quelques-uns. Mais les chiffres du Recensement sont tout simplement l'expression de faits dont le raisonnement seul démontre l'existence nécessaire. C'est précisément dans les districts où se trouvait anciennement la plus grande étendue de terres en friche possédées, que cette étendue doit diminuer dans de vastes proportions. Et pourquoi ? Simplement à cause des changements qui se produisent dans la résidence des propriétaires ou dans les limites des districts, et parce que ces terres devaient être vendues, et l'ont été effectivement dans une large mesure, à des habitants d'autres districts. En 1871, la ville de Québec avait 2,632,874 acres de terres possédées, et seulement 588,117 en 1881 ; mais le comté de Québec, qui entoure la ville, n'avait que 363,727 acres possédés en 1871, et 1,078,005 en 1881. Un simple déménagement de grands propriétaires, des limites de la ville au district voisin, explique l'énorme variation survenue dans les chiffres ; et si, allant aux informations, on apprend que des centaines de milles d'acres de terres en friche appartenant à des habitants de Québec ont été vendus à des habitants d'autres districts, comme l'ont été de vastes étendues situées à Anticosti, dans les cantons de l'Est, dans les seigneuries de Beaupré, Fossambault et dans plusieurs autres localités, l'étonnement tombe de lui-même.

Il est d'autres changements dus à d'autres causes que celles qui viennent d'être mentionnées, par le fait que le remaniement de certaines circonscriptions électorales, venant après le recensement de 1871, a rendu plusieurs districts de recensement très différents en 1881 de ce qu'ils étaient en 1871, sous le rapport du territoire, de la population et sous tous les autres rapports.

Donc, ici encore, ce n'est pas le Recensement qui est pris en flagrant délit de " faussetés extravagantes, etc., etc.," mais ce sont ses critiques.

Les mêmes observations s'appliquent aux lots de village, aux maisons, magasins, ateliers et navires ; la chose est tellement évidente, que ce serait faire insulte à l'intelligence du lecteur que d'insister sur ce point et de suivre cette méthode fantaisiste de critique.

their occupants and are registered in the same district, irrespective of the municipal limits; this occurs where there are commons, pleasure grounds and farms occupied by companies or inhabitants of a district, especially if it is of small area. It is for the same reason that products are registered in districts out of which they were got. Codfish and furs, for instance, registered in a district situate at a great distance from waters where codfish is caught, and forests where such furs are to be got: it simply means that these articles were entered where alone the information could be procured, without possibility of attributing them to any other specific district. The only alternative was to take them there or omit them from the reports; great care was taken not to run the risk of duplicating them: it is a question, not of figures, but of the way in which to proceed under peculiar circumstances.

Besides all that, it should not be lost sight of that the areas given in the volume first are from geographical measurement, when the areas carried in the third volume of land occupied are furnished, one by one, by the proprietors themselves; hence to suppose that under any or whatever circumstances these figures should precisely correspond would be a piece of rare *naiveté* to say the least.

Therefore the error, fallacy, or whatever name be given to it is not chargeable to the Census, but to those who assault it.

---

*There are Industries not at all Mentioned in some Districts.*

Of course there are in very many instances, as a matter of fact, districts in which many industries do not exist. The critics, not taking notice of that, besides, are making a confusion between a manufacture and a shop, between the industries by which a substance is made to change its form and the commercial operation by which products are sold. In other instances industries do not appear under a specific name for the reason explained in the introduction to the third volume, in the following words: "The division of labour is not so minute here as in older "and more populous communities, and so we find establishments grouped together, "as *carding and shingle mills, grist and carding mill*, &c., &c. It was found impossible "to separate one from the other, but they have been presented under the heading "to which the parties appear to attach the greatest importance." This is plain and reasonable, and was printed before any remark was ventured, from the outside, on the subject.

It is in following this groundless point of criticism that a local paper remarked, with indignation, that there were no stave mills credited to the County of Lambton. The fact is that the sawing and splitting of staves in this county, as in many others, is mixed with the two connex industries entered as whole under the titles of saw mills or cooperage, and a proof that the industry of stave making has not been overlooked, as regards the County of Lambton, lies in the fact that the said county is credited in the products of forests with 1,741,000 staves.

If a demonstration was wanted, *per contra*, of the errors in which the assaulters of the Census have fallen, we could find it in the commentaries of that paper on the stave industry. The critic says:—"The stave industry is one of the largest "in the country, and employs safely 1,000 men."

The fact is that the making of staves, instead of being one of the largest, is, *per se*, one of the smallest among the important industries of the country, and that 1,000 men, exclusively employed the whole year at stave making alone, could glut our home and foreign stave markets for several years. If the writer means, by stave industry, to combine the lumbering of the raw material and the cooper's work applied to the manufacture of staves into barrels, tubs, &c., &c., he is far short of the mark with 1,000 men; but if he means simply stave making he is much above the mark, being grossly in error anyhow; a state of affairs he would have mended for himself and his readers if, instead of unjustly attacking the Census, he had industriously studied it.

*L'excédant d'acres de terres occupées sur la superficie dans quelques districts.*

La raison et la signification en sont expliquées dans l'introduction du troisième volume, où il est dit: "Il y a exception lorsque les habitants des villes et des vil-"lages occupent et exploitent des terres situées en dehors des limites de telles loca-"lités, et sur lesquelles personne ne réside. Il arrive souvent, dans les anciens "villages et les cantons établis depuis longtemps, qu'une partie des terres occu-"pées s'étende au-delà des limites du village ou du canton." C'est très simple; on fait suivre aux acres occupés la personne de leurs occupants et ils sont enregistrés dans le même district, sans distinction de limites municipales; cela arrive dans les endroits où il y a des communes, des parterres d'agrément et des fermes occupés par des compagnies ou des habitants d'un district, surtout si leur superficie n'est pas considérable. C'est pour la même raison que des produits sont enregistrés dans des districts étrangers à leur production. Ainsi, par exemple, de la morue et des fourrures sont enregistrées dans un district très éloigné des eaux et des forêts d'où elles viennent: cela signifie simplement que ces articles ont été inscrits au seul endroit où il était possible d'en constater l'existence, sans courir le risque de les attribuer erronément à un autre district. La seule alternative qui restait était de les y porter ou de les omettre des rapports. On a pris grand soin de ne pas les inscrire en double. Ce n'est pas une question de chiffres, mais une question de savoir comment procéder dans des circonstances particulières.

Indépendamment de tout cela, il ne faut pas perdre de vue que les superficies données dans le premier volume sont le résultat de mesurages géographiques, tandis que les superficies des exploitations, données dans le troisième volume, ont été fournies par les propriétaires eux-mêmes. Par conséquent, supposer que ces chiffres devraient concorder d'une manière précise serait commettre une rare naïveté, pour ne pas dire plus.

Donc l'erreur, la fausseté, ou quel que soit le nom qu'on lui donne, n'est pas imputable au Recensement, mais bien à ceux qui l'attaquent.

---

*Il y a des industries qui ne sont pas du tout mentionnées dans quelques districts.*

Il y a, naturellement, des districts qui ne comptent pas plusieurs industries. Ne tenant pas compte de ce fait, les critiques confondent la fabrique avec le magazin, les industries qui font changer de forme à la matière première et l'opération commerciale qui écoule les produits. Dans d'autres cas, les industries ne sont pas spécialement dénommées pour la raison que l'introduction du troisième volume explique comme suit: "La division du travail n'est pas aussi minutieuse ici qu'elle l'est dans "les sociétés plus anciennes et plus populeuses, et c'est ainsi que l'on trouve "groupées ensemble différentes industries sous le nom de *moulin à carder et à bar-*"*deaux, moulin à farine et à carder*, etc., etc. Il a été impossible de les séparer, mais "elles ont été présentées sous le titre de l'industrie qui paraissait la plus impor-"tante." Ceci est simple et raisonnable, et a été imprimé avant qu'aucune observation soit venue de l'extérieur.

S'appuyant sur une erreur de ce genre, un journal de cette ville a fait observer, avec indignation, que le Recensement ne mentionnait pas les scieries de douves qui existent dans le comté de Lambton. Le fait est que la préparation des douves, en ce pays comme dans plusieurs autres, entre dans les deux industries désignées sous le titre de scieries et de tonnellerie; et une preuve que l'industrie de la fabrication des douves n'a pas été omise, en ce qui concerne le comté de Lambton, c'est qu'on a mis au crédit de ce comté 1,741,000 douves comme produits de la forêt.

Si on veut se convaincre davantage des erreurs dans lesquelles sont tombés ceux qui attaquent le Recensement, on n'a qu'à lire les commentaires de ce journal au sujet de l'industrie dont il est ici question. "L'industrie des douves, dit-il, est "une des plus importantes que nous ayons dans le pays: elle emploie au moins "1,000 hommes."

*The variance between the number of Hands and the Wages paid for identical or similar Industries in different Districts.*

As a matter of fact there exists differences on these points for various districts compared with others, and, of course, and correctly, the Census returns contain the expression of these differences. But there is an explanation which applies to many cases in which the difference is very large, and this explanation is given in the introduction to the third volume in the following words:—

"It may be remarked that in many establishments the workmen are not "regularly employed, nor during the whole year." Thence the difference between the aggregate of wages, and of work done, as compared with the number of hands employed.

But I admit that errors are to be found in the Census on that point in a few instances; they, however, do not materially influence the aggregate results. A few of these are errors of enumeration, the parties being careless in furnishing the correct information, and a few errors which have escaped the attention of the proof readers.

---

*There are districts credited with products they do not furnish, and others not credited with products the raw materials of which they do possess.*

Of course there are districts which manufacture some of their raw materials; many manufacture the raw materials of other districts, and even of foreign countries, and many do not manufacture their own or any other materials at all, except in common trades. But let us quote one of the critics, for example, on this complicated question; he says:—"The County of Jacques Cartier produced 150,000 cubic "feet of square white pine, though no one can tell where it grew, while the Coun- "ties of Kamouraska, L'Islet, Montmagny, Bellechasse, Beauce, Stanstead, Brome, "Huntingdon, Beauharnois, Montmorency, Joliette, Laval and Hochelaga did not "produce 1,200 feet of square pine of any sort among them all." These critics are not severe on themselves. It is in this way that they give the production of that list of counties as being less than actually found in the Census; but this is a venial sin and not worth mentioning, except as example of want of *scrupulous* exactitude when bitterly criticising the work of others.

The explanation of the above mentioned *data* is as simple as it is easy. The figures of the Census mean that a quantity of square pine has been registered in Jacques Cartier, because it was worked in Jacques Cartier, and found impossible to attribute it to any specific district of production. The other mentioned districts can be distributed into two categories—one comprising those which have produced no pine for consumption or export and have not squared any of an unknown origin; the other category is composed of such districts as choose to turn their pine into boards and deals, instead of making it into squared timber. Here again, therefore, it is not the Census, but the critics, who are at fault, for not knowing and refusing to be informed of the intricacies of subjects and the state of the country as regards production and other peculiar circumstances.

---

*The little Village of Shawville, in Pontiac, is returned as a large producer of grain, &c.*

The explanation of that case, represented as positively desperate, is nevertheless neither very intricate nor difficult of comprehension. The Township of Clarendon was divided into two sub-districts, *e* being Clarendon South, or Shawville, as often times mentioned under the name of this village, and *f*, Clarendon North. The consistent figures seen in all the Census tables, as relate to this sub-district, do at once indicate, to any intelligent and honestly disposed reader of the

Le fait est que la fabrication des douves, au lieu d'être une des premières de nos industries, est une des moins importantes, et que 1,000 hommes, exclusivement employés toute l'année à confectionner des douves, suffiraient à encombrer le marché pendant plusieurs années. Si, par industrie des douves, l'écrivain entend la préparation de la matière première et la tonnellerie appliquées à la confection des douves en barils, cuvettes, etc., etc., il se trompe en disant que 1,000 hommes suffisent à cette industrie; mais s'il veut parler seulement de la fabrication des douves, il exagère, et il commet, dans l'un et l'autre cas, une erreur grossière qu'il aurait évitée pour lui-même et ses lecteurs si, au lieu d'attaquer injustement le Recensement, il l'avait bien étudié.

*La disparité entre le nombre d'ouvriers et les gages payés pour des industries semblables, dans différents districts.*

Comme question de fait, il existe des différences sur ce point dans divers districts mis en ligne de comparaison, et les relevés du recensement les établit; l'introduction du troisième volume les explique comme suit :

" Il faut observer que dans beaucoup d'établissements, les personnes qui y sont " employées ne le sont pas régulièrement, non plus que durant toute l'année." De là la différence entre le total des gages et de la quantité de l'ouvrage exécuté, comparé avec le nombre des ouvriers.

Mais j'admets que l'on puisse, en quelques cas, trouver dans le Recensement des erreurs sur ce point : elles ne changent pas beaucoup le résultat général. Quelques-unes ont été faites dans l'énumération, parce que les intéressés ne se sont pas soucié de fournir des données exactes, et d'autres ont échappé à l'attention.

*Il y a des districts auxquels on attribue des produits qu'ils ne fournissent pas, et d'autres auxquels on ne reconnaît pas des produits dont ils possèdent les matières premières.*

Naturellement, il y a des districts qui fabriquent une partie de leurs matières premières; beaucoup fabriquent les matières premières d'autres districts, et même de pays étrangers, et beaucoup ne fabriquent pas du tout leurs propres matières ni aucunes autres, si ce n'est dans les industries ordinaires. Mais citons, par exemple, ce que dit l'un des critiques sur cette question compliquée : " Le comté de Jacques- " Cartier a produit 150,000 pieds cubes de pin blanc équarri, bien que personne ne " puisse dire où ce bois a poussé, tandis qu'à eux tous les comtés de Kamouraska, " de L'Islet, de Montmagny, de Bellechasse, de la Beauce, de Stanstead, de Brome, " d'Huntingdon, de Beauharnois, de Montmorency, de Joliette, de Laval et d'Hoche- " laga n'ont pas produit 1,200 pieds de pin équarri d'aucune espèce." Ces critiques ne sont pas sévères pour eux-mêmes. C'est de cette manière qu'ils donnent la production de cette liste de comtés comme étant moindre que ne le comporte le recensement; mais c'est là un péché véniel et qui ne vaut pas la peine qu'on en parle, si ce n'est comme exemple de leur manque d'exactitude *scrupuleuse* lorsqu'ils critiquent amèrement l'ouvrage des autres.

L'explication des données ci-dessus est aussi simple que facile. Les chiffres du recensement veulent dire qu'une certaine quantité de pin équarri a été inscrite dans Jacques-Cartier, parce que ce bois avait été façonné dans ce comté et qu'il était impossible de l'attribuer à une région de production particulière. Les autres comtés mentionnés peuvent être divisés en deux catégories—l'une comprenant ceux qui n'ont pas produit de pin équarri pour la consommation ni pour l'exportation, et qui n'ont pas équarri non plus de pin d'origine inconnue, et l'autre composée des régions qui prennent le parti de convertir leur pin en planches et en madrier au lieu d'en faire du bois carré. Par conséquent, ici encore ce n'est pas le recensement, mais les critiques qu'on trouve en défaut pour ne pas être renseignés, et refuser de l'être, sur les complications de sujets et la condition du pays relativement à la production et autres circonstances particulières.

Census, that they cannot apply to a small village. A clerical error was made in writing down the name of this sub-district; it should have been *Shawville and South Clarendon;* but this is not a question of figures or result, it is a simple and trifling question of copying.

*Crops are short of average in some sub-districts.*

This piece of criticism can hardly be excelled in point of silliness and puerility. Certainly there are localities where some or several crops were short, and in few instances very short of a common average. Therefore, the work of the critics was an easy one to pick up a certain number of sub-districts out of a total number of 2,137, in which few, some or several of the crops are returned as smaller or far short of the average, and to represent it as an error in every case. They do not take for granted that a shortness of crops, sometimes amounting to almost a failure, does virtually take place. They appear not to understand that an averags is an artificial figure made up of means drawn from actual numbers, a portion of which must be below and a portion above, and for some elements much below or much above the said average. For them, on the contrary, an average is a kind of bed of Procuste, to which precise length everything must be cut, if too long, or stretched if too short. Among the cases picked there may have been some errors of enumeration, but the total amount of them, if errors there be, forms an insignificant portion of the general result.

In regard to the wheat crop, 47 sub-districts are mentioned, in 43 of which a small crop is returned, in 3 of which the shortness amounts almost to a failure, and for one of which an apparent extravagantly large figure is printed in the volume. As regards the 46, nobody can tell really whether there are or are not positive errors, and to what they amount, if any. One is an error of printing; but I am inclined to think that there are few real errors in the lot, but I repeat, when immersed in the grand totals, they become imperceptible.

As far as the one error in excess is concerned, it is worth quoting to show the futility of the animadverting remarks to which such an important work as the Census of the country is subjected at the hands of some people. It refers to sub-district K, the village of Lucknow, in district 175, North Huron, in which *twelve acres* of land sown in wheat, be it well understood, *twelve acres are* made to have produced 243 bushels of wheat. An error of printing has occurred making it *one* acre; error, however, which is corrected in the *errata* at the beginning of the volume. Such an error would at once appear to be of such trifling general consequence that no critic, having the slightest respect for his reputation, would think of mentioning it. Besides, it is so evidently not an error of system, procedure, direction, enumeration or compilation, being simply one of posting or printing, and of such an infinitesimal import, that its mention in a criticism is ridiculous: when given as was done, separate from the context and surroundings, it becomes indicative of malice aforethought.

The potato crop is made the subject of a like criticism in relation to 20 sub-districts; there may be, in the lot, few, very few errors, but for most of them I have no doubt that the figures of the Census are the expression of actual facts; the potato crop, in several localities, owing to the Colorado beetle and other causes, having been reduced to one-half and one-third of a common average.

The same remarks apply to the cases of the 35 sub-districts selected as being erroneously enumerated, because the hay crop in these localities is returned at one-half or one-third of the general average. One of these 35 cases is one of apparent, extravagant exageration, precisely of a similar type as the case mentioned in regard to the wheat crop: sub-district *h*, village of Les Cèdres, District 74, Soulanges, with 25 acres, be it remarked *twenty-five* acres, is credited with 2,825 tons of hay instead of 23, an error coming from the fact that the hay crop was reported at 2,825 bundles, which should have been reduced into tons, as was done for all other such returns. This error is one of those escapes of attention very apt to be com-

*On représente le petit village de Shawville, dans le comté de Pontiac, comme grand producteur de grain, etc., etc.*

L'explication de ce cas, représenté comme positivement désespéré, n'est néanmoins ni très compliquée ni difficile à comprendre. Le township de Clarendon a été partagé en deux subdivisions, savoir: *e*, Clarendon-Sud, ou Shawville, ainsi que mainte fois mentionnée sous le nom de ce village, et *f*, Clarendon-Nord. Pour tout lecteur intelligent et de bonne foi, les chiffres compatibles de tous les tableaux du recensement, en ce qu'ils regardent cette subdivision, indiquent immédiatement qu'ils ne sauraient s'appliquer à un petit village. Une erreur de copiste a été faite dans l'inscription du nom de cette subdivision qui aurait dû être *Shawville et Clarendon-Sud.* Il ne s'agit pas ici de chiffres ni de résultat; c'est une simple et insignifiante question d'écriture.

---

*Les récoltes sont au-dessous de la moyenne dans certaines subdivisions.*

Ce point de critique ne peut guère être surpassé en fait de niaiserie et de puérilité. Il y a certainement des localités où quelques ou plusieurs récoltes se sont trouvées au-dessous, et, en quelques cas, beaucoup au-dessous d'une moyenne ordinaire. Par conséquent, c'était chose facile pour les critiques de choisir, sur un total de 2,137, un certain nombre de subdivisions dont quelques-unes, certaines ou plusieurs des récoltes sont représentées comme au-dessous ou beaucoup au dessous de la moyenne, et de donner la chose comme une erreur dans chaque cas. Ils ne supposent pas qu'un insuccès, équivalant quelquefois presque à un manque de récolte, a virtuellement lieu. Ils ne paraissent pas comprendre qu'une moyenne est un chiffre artificiel composé de termes tirés de nombre réels dont une partie doit être au-dessous et une partie au-dessus, et pour certains éléments, beaucoup au-dessous ou beaucoup au-dessus de cette moyenne. Au contraire, pour eux une moyenne est une sorte de lit de Procuste, à la longueur précise duquel toute chose doit être coupée si elle est trop longue, ou étirée si elle est trop courte. Parmi les cas signalés il peut y avoir eu des erreurs d'énumération, mais leur montant total—si erreurs il y a—ne constitue qu'une partie insignifiante du résultat général.

A l'égard de la récolte de blé, on mentionne 47 subdivisions dans 43 desquelles le recensement accuse une faible récolte, tandis que dans 3 de ces subdivisions l'insuccès équivaut presque à un manque absolu, et que pour une le volume donne un chiffre extravagamment élevé. Pour 46 de ces subdivisions, personne ne peut réellement dire s'il y a ou non des erreurs positives, et à quoi elle s'élèvent, s'il en est; l'autre offre une faute d'impression. Mais je suis porté à croire qu'il y a peu d'erreurs réelles sur le nombre; et, je le répète, confondues dans les grands totaux, elles deviennent imperceptibles.

En tant que l'unique erreur d'excédant se trouve concernée, elle vaut la peine d'être citée pour montrer la futilité des critiques auxquelles un ouvrage important comme le recensement du pays est exposé de la part de certaines gens. Cette erreur se rapporte à la subdivision K—village de Lucknow—dans la division 175—Huron-Nord—où l'on dit que *douze acres* de terre ensemencées de blé (que l'on comprenne bien, *douze acres*) ont produit 243 boisseaux de ce grain. Une faute d'impression a fait de ces douze acres *un* acre, mais elle est corrigée dans l'errata au commencement du volume. Une pareille erreur semblerait à l'instant d'une conséquence générale si insignifiante qu'aucun critique ayant le moindre souci de sa réputation, ne songerait à s'y arrêter. En outre, ce n'est évidemment pas une erreur de système, ni de procédure, ni de direction, ni d'énumération, ni de compilation, mais simplement une faute d'inscription ou d'impression, et d'une importance si infiniment petite, que la mentionner dans une critique est ridicule. Donnée comme elle l'a été, sans ce qui l'accompagne dans la contexte, elle devient un indice de malice préméditée.

La récolte de pommes de terre a été l'objet d'une semblable critique relativement à 20 subdivisions. Sur le nombre, il peut se rencontrer quelques erreurs, mais

mitted in such a multiplicity of details, but which, after all, is only a drop when diluted in the total. The wonder is that no more of such errors have been found, after a diligent and earnest search for them by ill-disposed critics, through the intricacies of the hundreds of columns, the thousands of lines and the myriads of figures contained in the Census.

*In a few districts the number of occupiers of lands is less in* 1881 *than it was in* 1871.

The critics have discovered that in eight districts the occupiers of lands are, to a small extent, fewer in number according to the last Census than they were represented to be by the Census before last; on making that very marvellous discovery one of them exclaims :—" Who is to be held responsible for these discrepancies—Providence, the Exodus or the Compiler ? " The answer is, there being no discrepancy between figures which cannot, by any possibility, be exactly the same, it follows that there is no responsibility to attach anywhere. This diminution in the number of occupiers simply means that there had been transactions by which some holdings have been added to others, giving in such cases one occupier, where there were two in 1871. Farmers sell to their neighbours or somebody else in their districts their holdings, to go and settle in other districts or in the west; it stands to reason that such transactions lessen the number of occupiers in the district where they take place, without injury to anyone in particular nor to the country as a whole; nay to the marked advantage oftentimes to all concerned.

*The Acreage of Lands Occupied in some Districts is given in* 1881 *as Smaller than it was in* 1871.

In this instance there would be a real discrepancy if it were in regard to information which could be expected to be mathematically exact and to agree; but on the least reflection any person would immediately perceive that such accuracy or agreement is an impossibility. How can you expect that thousands of farmers could, at ten years interval of time, and when a change of persons has taken place in many cases, give the enumerators the mathematically correct area of their holdings ? The idea is preposterous. Out of the 34 districts inscribed on the list of the critics there are more than one-third of which the difference is not worth mentioning, one of them being so small as thirty-five acres for the district ! I am inclined to think, for some of them, that there are errors of enumeration, although no one can say whether they belong to one Census or the other. Where alone these errors, if errors they are, influence to any appreciable extent the provincial totals is in New Brunswick, and there the result of the influence amounts to less than *five-tenths of one* in one hundred acres; which, I repeat, may be again divided between the two Census returns.

But apart from these reasonable explanations, which apply to all ordinary circumstances, there is for some districts, in this instance, the special reason that, by the electorial readjustment of 1872, the limits and extents of districts have been altered, creating new districts at the expense of others, and altering the condition of many more.

*The acreage of land improved in a few Districts is smaller in the Census of* 1881, *as compared with the Census of* 1871.

The same explanation that is given in the next preceding paragraph applies to the present one; and, moreover, several of the fourteen districts inscribed in the catagory are city districts, or districts where village, urban or suburban population has increased, and in which, consequently, many acres must have been

pour la plupart je ne doute pas que les chiffres du recensement soient l'expression de faits réels, vu que la chrysomèle et d'autres causes ont, dans plusieurs localités, réduit la récolte de pommes de terre à la moitié et au tiers d'une moyenne ordinaire.

Les mêmes observations s'appliquent aux cas des 35 subdivisions où l'on prétend que l'énumération a été mal faite, parce que, dans ces localités, la récolte de foin est placée à la moitié ou au tiers de la moyenne générale. L'un de ces 35 cas en est un d'évidente exagération, et précisément du même caractère que celui mentionné à l'égard de la récole de blé : on attribue au sous-district *h*—village des Cèdres—du district 74—Soulanges,— étant donné 25 acres de terre (qu'on le remarque, *vingt-cinq acres*), 2,825 tonnes de foin au lieu de 23, erreur venant du fait que la récolte de foin a été représentée comme étant de 2,825 bottes qui auraient dû être réduites en tonnes ainsi que cela a été fait pour tous les autres rapports de même nature. Cette erreur est l'une de ces fautes d'attention très faciles à commettre dans une pareille multiplicité de détails, mais qui, après tout, ne signifie rien confondue dans le total. La merveille est que des critiques malveillants n'aient pas trouvé un plus grand nombre de ces erreurs après une laborieuse et ardente recherche à travers les complications des centaines de colonnes, des milliers de lignes et des myriades de chiffres contenus dans le recensement.

*Dans quelques divisions le nombre d'occupants de terrains est, en* 1881, *moins élevé qu'il ne l'était en* 1871.

Les critiques ont découvert que d'après le dernier recensement le nombre des occupants de terrains, dans 8 divisions de recensement, est, dans une légère mesure, moins élevé que ne le représentait l'avant-dernier recensement. En faisant cette merveilleuse découverte, l'un d'eux s'écrie :—" Qui doit être tenu responsable de " cette différence—la providence, l'exode ou le compilateur ? " La réponse est que n'y ayant pas de rapport entre des chiffres qui ne peuvent en aucune manière être exactement les mêmes, il s'en suit qu'il n'y a de responsabilité à faire porter nulle part. Cette diminution du nombre des occupants signifie simplement qu'il y a eu des transactions par lesquelles des terrains ont été ajoutés à d'autres, ce qui, dans ces cas, a mis un occupant où il y en avait deux en 1871. Des cultivateurs vendent leurs fermes à leurs voisins ou à d'autres dans leurs districts, pour aller s'établir dans d'autres districts ou dans l'ouest. Le simple bon sens veut que ces transactions aient pour effet de diminuer le nombre d'occupants dans le district où elles ont lieu, sans faire de tort à qui que ce soit en particulier ni au pays en général, et qui plus est, souvent à l'avantage marqué de tous les intéressés.

*Dans quelques districts l'étendue des terrains occupés est représentée en* 1881 *comme moins grande qu'elle ne l'était en* 1871.

Dans ce cas-ci il y aurait une différence réelle s'il s'agissait de renseignements auxquels on pourrait s'attendre de trouver une exactitude mathématique ; mais à la moindre réflection il n'est personne qui ne voie qu'une pareille exactitude est impossible. Comment peut-on espérer que des milliers de cultivateurs puissent, à dix ans d'intervalle, et lorsqu'un changement de personnes a eu lieu en beaucoup de cas, donner aux énumérateurs la superficie mathématiquement exacte de leurs fermes ? L'idée est absurde. Sur les 34 districts que donne la liste des critiques il y en a plus d'un tiers dont la différence ne vaut pas la peine d'être mentionnée. Pour l'un d'eux cette différence n'est que de 35 acres ! Je suis porté à croire que pour certains de ces districts il y a des erreurs d'énumération ; mais personne ne peut dire auquel des deux recensements elles peuvent être imputées. Le seul endroit où ces erreurs—si erreurs il y a—affectent dans une mesure appréciable les totaux provinciaux, est le Nouveau-Brunswick, et là le résultat de cette influence se réduit à moins de *cinq dixièmes d'acre* par cent acres,—ce qui, je le répète, peut encore être partagé entre les deux recensements.

transferred, from the class of improved farm lands, into the class of village or town lots. It is in this way that *twenty-one acres* less of improved farm lands in Halifax and *twenty-four* in Toronto are more than easily accounted for, these two cities being among the districts picked up by the critics for their reproofs on this point.

---

*The Area of Pasturage is less in several Districts than was reported in* 1871.

This is after all, perhaps, the masterpiece of the sort of criticism which has been indulged in. Inasmuch as in Canada the improved lands not under some crops or in gardens or orchards are resorted to as pasturage for a good part of the summer season, if not for the whole season, the Canadian farmers report in pasturage all the improved area which is not reported by them under some other heading: so the column headed pasturage in the Census is filled with the arithmetical *balance* of land improved not otherwise accounted for. Therefore there *cannot* be noticed any error in this coulmn separately taken, unless it be an error of addition, and of such there has been none discovered. A diminution in the acreage of pasturage means simply a corresponding increase in the land under crop. As a matter of fact the *proportionate* area of pasturage must have undergone a certain diminution on account of the progress in the final clearing of land, and, in several districts, of the greater resort to stall feeding, as compared with grazing, which has characterised our live stock operations for several years past, in certain portions of our territory; and the result of such alteration in our agricultural pursuits is shown in the general returns of the Census, where it is seen that, while the total area in acres of the pasture lands have increased between the years of 1871 and 1881 in the four older Provinces of the Dominion by 17 per cent., the total area of improved lands has reached an increase of 20 per cent. Another proof that every known broad fact, in regard to the material conditions of the country, is accurately substantiated by the general results of the Census; and when the grand results have attained such degree of exactitude which can be expected, from the nature of things, the details cannot be wrong as a rule.

These critics, the work of whom I have briefly reviewed in what they represent as the most egregious blunders, these critics, who evidently would be delighted if the Census was really badly executed, these critics have virtually brought forward a most emphatic proof of the practical accuracy and reliability of the returns they have assailed.

After such a diligent search, animated by such a craving for errors, to have come to such a failure as to pick up few, very few errors, indeed, or possible errors of no general consequence, and an array of supposed errors of the Census which, in reality, are blunders on the part of the critics themselves, is certainly a result well calculated to please those who have had something to with such a vast undertaking, and to enhance public confidence in one of our most important state documents."

OTTAWA, 19th June, 1883.

---

Mais en dehors de ces explications raisonnables qui s'appliquent à toutes circonstances ordinaires, il y a, dans ce cas-ci, pour certains districts, la raison spéciale que par l'acte de 1872, pourvoyant à une nouvelle délimitation des collèges électoraux, on a modifié les limites et l'étendue de certains districts en créant de nouveaux districts aux dépens de certains autres et changeant l'étendue d'un plus grand nombre encore.

*Le recensement de* 1881 *accuse, pour quelques districts, une étendue de terre améliorée moins considérable que celui de* 1871.

L'explication donnée dans le paragraphe qui précède s'applique à celui-ci. En outre, plusieurs des 14 districts inscrits dans la catégorie sont des districts urbains, ou des districts dont la population villageoise, urbaine ou suburbaine a augmenté, et dans lesquels, conséquemment, maints acres de terre sont passés de la classe des terrains en culture dans celle des lots de ville et de village. C'est ainsi qu'on peut plus que facilement rendre compte du déficit de *vingt et un acres* de terrains cultivés à Halifax et de vingt-quatre à Toronto, villes qui se trouvent parmi les districts choisis par les critiques pour leurs accusations sur ce point.

*Dans plusieurs districts l'étendue de pâturage est moindre que celle représentée en* 1871.

Voici peut-être, après tout, le chef-d'œuvre de l'espèce de critique à laquelle on s'est livré. Vu qu'en Canada les terres améliorées qui ne sont pas ensemencées et ne sont ni en jardins ni en vergers, servent de pâturages pendant une bonne partie de l'été, sinon pendant toute la saison, les cultivateurs déclarent comme pâturage toute l'étendue de terrain qu'ils ne classent pas sous quelqu'autre chef ; ainsi, la colonne intitulée " Pâturage " dans les tableaux du recensement, est affectée à la *balance* arithmétique des terrains améliorés dont il n'est pas autrement rendu compte. Par conséquent on *ne peut* remarquer aucune erreur dans cette colonne prise séparément, à moins que ce ne soit une erreur d'addition, et de celles-ci il n'en a pas été découvert. Une diminution de l'étendue de pâturage signifie simplement une augmentation correspondante de terrain en culture. Comme question de fait, la superficie *proportionnelle* de pâturage doit avoir subi une certaine diminution à cause des progrès du déboisement définitif, et, dans plusieurs districts, par le fait que l'on a eu davantage recours à la stabulation prolongée ou permanente qui a caractérisé notre élevage de bétail, depuis plusieurs années, dans certaines parties du pays. Le résultat de cette modification de notre industrie agricole est indiqué dans les relevés généraux du recensement, où l'on voit que tandis que la superficie totale de pâturage a, entre les années 1871 et 1881, augmenté de 17 pour 100 dans les anciennes provinces du Canada, la superficie totale des terrains améliorés a atteint une augmentation de 20 pour 100. Autre preuve que chaque fait connu, de la condition matérielle du pays, est exactement établi par les résultats généraux du recensement ; et, d'ordinaire, lorsque les grands résultats ont atteint le degré d'exactitude que la nature des choses peut donner lieu d'espérer, les détails ne sauraient être bien erronés.

Ces critiques dont j'ai rapidement analysé l'ouvrage dans leurs bévues les plus grossières, ces critiques qui, évidemment, seraient enchantés que le recensement fût mal fait, ces critiques ont virtuellement fourni la meilleure preuve de l'exactitude et de la fidélité pratiques du recensement qu'ils ont attaqué.

Après de si ardentes recherches faites par des hommes pleins du désir de dénicher des erreurs, avoir échoué au point de ne relever que peu, très peu en vérité de ces erreurs, ou des erreurs possibles de nulle conséquence générale, et une série d'erreurs supposées du recensement qui, en réalité, sont des bévues de la part des critiques eux-mêmes—est certainement un résultat bien propre à faire plaisir à ceux qui ont eu quelque chose à faire dans cette vaste entreprise, et à augmenter la confiance publique dans l'un des plus importants documents de l'Etat.

OTTAOUA, 19 juin 1883.

Table A gives the number of persons to a square mile and kilometre respectively for each Province, the Territories and for Canada, to a house, to a family, &c. It also gives the ratio of the sexes and the conjugal condition of the people.

Table B is a summary of the religious denominations and the proportion of each denomination to 1,000 of the population and to 1,000 families.

Table C is a similar statement of the origin of the people, and Table D of the birth places.

Table E is a statement of the area, density, population and increases of the towns and cities having a present population of over 5,000, for the years 1861, 1871, and 1881.

Table F treats of the whole population by ages and sexes for each Province, the Territories and the whole combined, giving the persons living at each age, the percentage and the number of persons at and above each year of age.

Those at ninety-one years and over are given collectively, for the reason that they are never given with exactitude, and do but represent that so many persons are living at extreme old age. This table also gives the mean average age for each Province and for Canada.

Tables G and H give, respectively, the ages of the married and the widowed, also the proportions to 1,000 of the population and sexes.

Table I—1. Going to school with per centage of increase over 1871. I—II. Infirmities and their ratios to 1,000 of the population and to 1,000 of the sexes separately.

Table J, occupations of the people and their ratios to 1,000 of the population; of each class separately to 1,000 of the aggregate of all and of each of the other classes, to 1,000 of the agricultural.

Table K gives the total number of churches of all denominations, and average number of persons of each denomination to their respective churches. It also gives the number of educational, benevolent and other institutions with average number of inmates, and the number of churches and institutions o 10,000 of the population.

Tables L and M treat of immovable property and shipping, with ratios to 1,000 of population, extent of land owned and number of owners, also of lands occupied and cultivated.

Table N treats of animals and animal products, giving ratios to 1,000 of the population, and of lands under crop.

Table O gives information with regard to field products and their ratios.

Table P treats of various products and furs, giving the ratios.

Le tableau A donne les proportions de la population au mille et au kilomètre carrés, pour chaque province, les Territoires, et le Canada, aux demeures, aux ménages, aux sexes et à l'état des personnes tels que constaté par le recensement de 1881.

Le tableau B, donne un état sommaire des cultes et les proportions de chaque dénomination religieuse, par 1,000 de la population et par 1,000 familles.

Le tableau C donne les mêmes renseignements proportionnels de chaque origine, et le tableau D des lieux de naissance.

Le tableau E donne la superficie, la densité de la population des principales villes ayant une population au-dessus de 5,000 âmes, pour les années 1861, 1871 et 1881.

Le tableau F a trait au total de la population par âge et par sexe, pour chaque province, les Territoires et le Canada, donnant le nombre de personnes vivant à chaque âge, ainsi que le percentage des personnes vivant à chaque âge.

A partir de 91 ans et au-dessus, les âges sont donnés collectivement, vu qu'ils ne sont jamais donnés avec exactitude et le chiffre collectif veut tout simplement dire que tant de personnes vivent à un âge très avancé—Ce tableau donne aussi la moyenne des âges pour chaque province et pour le Canada.

Les tableaux G et H, donnent par catégories d'âges, les âges des mariés et des veufs, ainsi que les proportions à 1,000 de la population et des sexes.

Le tableau I—I, allant à l'école, avec le percentage de l'augmentation sur 1871. Le tableau I—II, donne l'état sommaire des infirmités avec leurs proportions à 1,000 de la population, et à 1,000 de chaque sexe séparément.

Le tableau J donne les rapports des occupations à 1,000 de la population; de chaque classe séparément à 1,000 de leur ensemble; et de chacune des autres classes à 1,000 de la classe agricole.

Le tableau K donne le nombre des églises de toutes les confessions et le nombre moyen de personnes appartenant à chaque confession; ainsi que le nombre des institutions de bienfaisance et d'éducation avec le nombre de personnes internées. Ce tableau représente aussi les rapports des églises et des institutions à 10,000 de la population.

Les tableaux L et M ont trait à la propriété foncière et maritime, donnant les proportions à 1,000 de la population, l'étendue de terre possédée, le nombre de propriétaires et la quantité d'acres de terre possédée et occupée.

Le tableau N traite des animaux et de leurs produits, donnant leurs proportions à 1,000 de la population, et des terres sous culture.

Le tableau O donne les rapports des produits des champs et leurs proportions.

Le tableau P donne les rapports des fourrures et des divers produits, avec proportions.

Table Q deals with the products of the forest, giving ratios to 10,000 acres total area, and to 10,000 acres of unsettled lands. It also gives the number of cords of firewood to each inhabited house.

Tables R—I and R—II treat of the products of the fisheries and ratios to 1,000 of population; distinguishing the Maritime fisheries from those of inland waters, the whole being divided by Provinces. R—II. Showing the aggregate quantities severally for inland and tidal waters.

Table S gives the population of 1871 and 1881 compared by electoral districts, as established by the Re-Adjustment Act of 1882, in tabulated form with the increases and decreases of the several electoral district, and changes of minor divisions from one district to another, the change being noted when taken from its original district by being printed in italics, with a note, saying to what district it has been annexed.

*Second Part.*

Table I. Statement of Territorial Circumscriptions of the movement of the Catholic population of the Province of Quebec, during the year 1876 to 1883, being a continuation of Table III, second part of vol. V, Census of 1871.

Table II. Statement of the movement of the Catholic Population of the Province of Quebec, year by year, since 1876 to 1883.

Table III. Statement of the accumulated excess of Births over Deaths of the Catholic Population of the Province of Quebec, from its early settlement to the year 1883.

Le tableau Q donne le rapport de la production forestière et les proportions à 10,000 acres du total de la superficie et à 10,000 acres des terres non établies. Il donne aussi le nombre de cordes de bois de chauffage par chaque maison habitée.

Les tableaux R—I et R—II traitent de la production des pêcheries et leurs proportions à 1,000 de la population, distinguant les produits de la pêche maritime des produits de la pêche faite dans les eaux intérieures; le tout partagé en divisions par provinces. R—II montrant la quantité sommaire de la pêche maritime et des eaux intérieures.

Le tableau S donne un état de la population de 1871 et 1881 comparée par Districts électoraux, tels que constitués par l'Acte du Nouvel Ajustement de 1882, avec les augmentations et les diminutions de chaque district électoral, ainsi que les changements des sous-districts d'un district à un autre. Le nom du sous-district, en italiques, indique qu'il a été détaché du district dans lequel il se trouve pour être annexé à un autre district indiqué par une note.

SECONDE PARTIE.

Tableau I. Etat des circonscriptions territoriales du mouvement de la population catholique de la Province de Québec, durant les années 1876 à 1883, étant la suite du tableau III, seconde partie, vol. V, Recensement de 1871.

Tableau II. Etat, par année, du mouvement de la population catholique de la Province de Québec de 1876 jusqu'à 1883.

Tableau III. Etat de l'excédent accumulé des naissances sur les décès de la population catholique de la Province de Québec, depuis l'origine jusqu'à 1883.

* The withdrawal of the troops from these two military stations, and in the case of Quebec, in addition to this, the transfer of the seat of the general Government to Ottawa, are the causes of this apparent diminution of Population.

† The indicated decrease of the population of the City of St. John is attributable to the great fire which occurred in the year 1877, when half the City was laid in ashes Great numbers where thereby driven into the surrounding districts, and many whose business and social ties were thus severed, did not return to the City.

## Population comparée des Villes ayant plus de 5,000 habitants.

* Le retrait des troupes de ces deux stations militaires, et pour Québec, de plus, le transfèrement du siége du gouvernement général à Ottaoua sont causes de cette diminution de population.

† La diminution de la population de la ville de Saint-Jean est due au grand incendie qui eut lieu en 1877 et qui réduisit en cendres la moitié de la ville. Cet incendie obligea un grand nombre de personnes à se rendre dans les districts environnants, et plusieurs de ces personnes dont les affaires furent détruites par cet événement, ne sont point retournées à Saint-Jean.
